

# Subalpine Lupine

*Lupinus arcticus*

## Budding:

- Small purple buds
- Early stages have hairy sepal lining the back of the bud

## Flowering:

- The flowers are blue to blue-violet and occasionally have white centers
- Each inflorescence has multiple rows (1-6) of 5 flowers encircling the stem

## Ripening Fruit:

- Green pods that look like beans replace the flowers
- They are fuzzy and develop to brown pods ~ 1 inch (3cm) long

## Releasing Seed:

- Once brown, the pods split open, and each half curls back onto itself

**\*\*NOTE\*\*** It is common for individual *Lupine* stalks to have multiple phenophases – make careful observations & be sure to consider which phenophases are present and absent.
